 Intermedia Publishing, is dedicated to the restoration and conservation of the environment. Our books are manufactured with strict adherence to an environmental management system in accordance with ISO 14001 standards, including the use of paper from mills certified to derive their products from well-managed forests. We are committed to continued investigation of alternative paper products and environmentally responsible manufacturing processes to ensure the preservation of our fragile planet.

Norm Applebaum Architect, page 145

INTRODUCTION

Every residence has its own personality, but when homes are created from masterful minds and skilled hands, there are a few things they have in common. The careful attention to proportion, light, and form can be seen in every space featured on the pages of *The Modern Residence*, regardless of the aesthetic or style. They have been thoughtfully designed to respond to the families who reside within, and seek to enhance the residents' overall quality and enjoyment of life. Modern architecture is not simply about shelter, it is art in the built form that seeks to improve lives—and the homes featured here do just that.

With dwellings that span the United States and Canada, you'll find homes from the southeast to the northeast, and from the west to the central United States. The geographic locations are diverse and each project presents its own set of benefits and challenges—topography, climate, and culture play key roles in shaping a home's design and function. Hammer Architects, for example, uses materials that make sense for the harsh conditions of the Atlantic Coast. One home sits atop a coastal bluff and is clad in western red cedar and mahogany that will change colors beautifully as it ages, and blends into the natural wooded landscape. Here, the home responds and adapts to its environment and is a direct reflection of its surroundings. In Aspen, Sinclair Building Architecture Design sources local materials whenever possible and works with the limited infrastructure available in mountainous terrain. The remote location is what makes the homes so appealing and also presents the biggest obstacle throughout the building phase. For Texas-based Malone Maxwell Borson Architects, the region's seasonal heavy rains can present specific challenges when designing a home. When the firm worked on a site that sat adjacent to a floodplain, the house had to be carefully integrated into the site's considerable natural grade. The slope was of the utmost importance and the design of the home benefited from strong elements that could withstand intense thunderstorms, with materials such as brick and cedar. These location-specific dwellings are distinct, stunning modern representations of their place and offer a sense of timelessness.

Behind these homes is a network of skilled professionals, and although architects are at the forefront of their projects, most of them will quickly admit that they would be nothing without their trusted teams. Interior designers, metalworkers, builders, woodworkers, and the support systems within the firms make it all possible. The architects and designers featured within these pages have not only built a reputation through their impressive work, but because they also bring the strongest, most trusted crews to every project. The homes featured on the pages of *The Modern Residence* are a testament to the talent of North American architectural teams.

BELOW AND FACING PAGE: This soft mountain contemporary-style home sits on a corner lot in Aspen's coveted West End, thus creating a visually dynamic exterior from all aspects. Capturing sunlight throughout the day, this home is enjoyable during every Colorado season. The use of approachable elements, such as stone, wood, and metal, celebrates the historic character of the neighborhood while expressing its own unique style.
Photographs by Gibeon Photography

This award-winning boutique architecture firm, based in Aspen Colorado, specializes in luxury residential architecture from San Francisco to Washington DC, and internationally. Since the firm's inception, Jamie L Brewster McLeod, has strived to provide exceptional design that truly brings out a sense of place.

Jamie's focus is creating architecture as living art forms designed perfectly within their natural environments. The result is architecture set naturally within the landscape creating the setting for each custom creation.

The goal of each design is to ensure all elements of the homeowners' desires are expressed with stylistic insight and thoughtful design, thus creating a relationship with her clients that transforms their dreams into reality.

As an all-inclusive custom firm, Brewster McLeod Architects is there from the initial ideas throughout the construction and final finishing touches each home deserves.

BELOW TOP: Clean, artistic stairs help celebrate the circulation space in the center of the home, creating a central art piece viewed on all three levels.

BELOW BOTTOM LEFT: Since the homeowners are oenophiles as well as winemakers, we created a custom wine room as a focal point to the lower floor living area.

BELOW BOTTOM RIGHT: An open floor plan throughout the main floor creates the ideal entertaining space. The inlay-wood ceiling provides a rustic touch that balances the modern elements of the state-of-the-art kitchen, fit for a chef.

FACING PAGE: High ceilings in the living room help filter natural light into the open main floor living spaces while highlighting the modern stone fireplace feature.
